Pavati Wake Boats Monthly Newsletter - July 2014

Pavati Boats was established in 2009 when Highway Products, Inc. set out to build the first aluminum v-drive wake boat. After five years of research and development, we were successful in doing exactly that. Many people ask us “If building an aluminum wake boat is such a good

idea, then why hasn't it been done before?" It's a fair question, but the answer is simple: until now, it hasn't been possible. However, with recent innovations in technology, state of the art software and machinery, it has only become possible in the past few years to build an aluminum wake boat. In fact, Pavati contributed a great deal to making it possible, in the process of developing the AL Series boat.

With backing of the Highway Products' engineering staff, advanced manufacturing equipment, specialized welders, and 36 years of business of manufacturing high-end truck parts & accessories and aluminum fishing & drift boats, Pavati is the proud manufacturer of the most premium wake boats in the industry.

Danny Hampson - Graceland

Liquid Force from Liquid Force PLUS 11 months ago NOT YET RATED

Danny put it all on the line for the summer of 2013. Sit back and watch this Danny Hampson epic unfold before your very eyes.

PAVATI

Danny Hampson - Graceland

Wow, just wow. Frontside Bigspin and Heelside Frontside 360 both into the flats? Yep. Produced by Liquid Force and Collin Harrington, this edit of Danny Hampson is mind blowing. Rated by Wakeboarding Magazine as their #1 video of 2013, we thought you might enjoy this one...especially the end of video where he absolutely just eats it!

Product Spotlight: Pavati AL-24

PAVATI

Introducing the new Pavati AL-24, the most innovative, powerful and durable wake boat available. Pavati wake boats are built from raw, natural aluminum. That means they'll never break down, shatter rot, rust, or emit harmful fumes. Pavati boats are built to last forever. 24 feet of pure excitement, built with Corvette LS Series engines (diesel available) to provide the thrust and on-demand torque every wake and surf enthusiast craves.

Every aspect is engineered using the most advanced manufacturing technology available including our exclusive Rip Tide™ Surf System. More durable than fiberglass, the lighter weight and maintenance free properties of aluminum are more economical on – and off the water. Indestructible, outstanding performances, innovative technology – the Pavati AL-24, pure

elements never die.

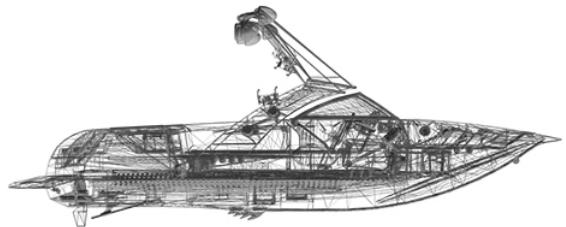

Standard Features

- Boat Length: 24'8" (26'4" with removable platform)
- Maximum Width: 8'6"
- Dry Weight: 4,200 LBS
- Fuel Capacity: 65 Gallons
- Height w/ Tower Erect: 10'4"
- Seating: 18 People
- Capacity: 2,500 LBS
- Ballast: 4,200 - 4,800 LBS
- Storage: 147 cu ft
- Gauge: 1', .250:, .188", .125" Aluminum

INNOVATIVE DESIGN

Solid Aluminum Body

The AL-24 is built from 0.25" aluminum, making it significantly stronger than its fiberglass counterparts, and yet requiring far less room for structural support. That means more room for storage, more seating, and a fully integrated welded ballast. And with a solid aluminum body, it doesn't need a "rub rail" to hide the 2-piece hull. That means more strength and a classier presentation.

Computer Designed Hull

Every aspect has been carefully planned and engineered using the most advanced manufacturing software available...

[Learn More >>>](#)

Fully Welded

When we say that the AL-24 is fully welded, we mean that every seam is welded completely. There are no tack welds, rivets...

[Learn More >>>](#)

No Molds. No Restraints.

Fiberglass molds are extremely expensive to build. Once a mold is built, manufacturers have to use it for years to recoup their costs and become profitable. That means limited options and limited change between models and years. With aluminum, there are no molds. Every boat we build can be customized or modified to fit your style. Choose between extra storage and an additional 600 lbs. of integrated ballast in the bow. Choose between a surf lounge and a three-seat transom. When we designed the AL-24, we designed it specifically to put all the control and options in your hands. We didn't just break the mold; we never had one.

Environmentally Friendly Manufacturing

Pavati owners boast the most environmentally friendly wake boat ever built. Not only does the AL-24 consume less fossil fuel in transport and operation, but also aluminum is a completely natural and raw material. That means no

toxic chemicals or emissions whatsoever. And since it's natural, all scrap material in the manufacturing process is recyclable.

Cooler

A refreshing built-in removable cooler compartment in the floor is perfect for storing ice cold beverages, cooler included...

Coffin Storage

Massive storage compartments, including this full length throughout the boat lift easily with gas-assisted shocks...

Garbage/Recycle

CNC-machined trash and recycle bins built right into the floor helps keep your boat clean, organized and debris free while out on the water...

Tri-Tip Bow

Our massive bow offers spacious seating for relaxing and opens up for additional storage or an additional 600 lbs. of ballast...

Transom

Transom walk through offers safe and easy access to the lounge, coolers, Surf Lounge™, and swim platform in the stern of the boat...

Surf Lounge™

Our exclusive full length Surf Lounge™ offers seating for four above the swim deck, and rear transom hatch access to equipment...

STYLING OPTIONS

Paint Options

One of the most important benefits of aluminum is the ability to style your boat however you want. Gel coat is not required so you have the freedom to paint or wrap your own boat in whatever way you like. And since we use the highest quality of automotive paint and vinyl materials, whatever options you decide on will end up lasting much longer than a gel coat finish. For decades, our polyurethane enamel has been the finish of choice by leading heavy-duty truck, commercial vehicle, aircraft, boat, industrial application and specialty vehicle manufacturers, and here at Pavati we use only the highest quality paint.

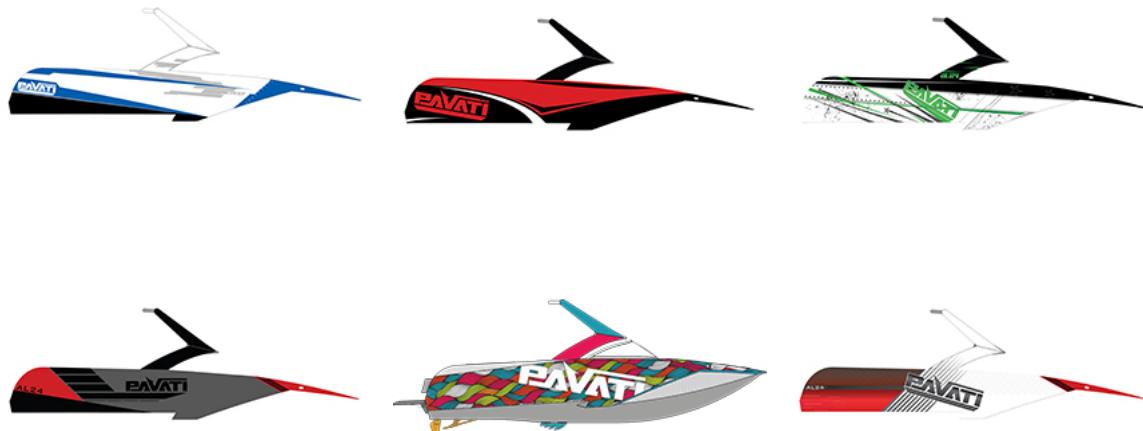

Vinyl Wrap Options

Automotive-grade vinyl wraps are a great way to put a personal expression on your boat, but still keep it simple and clean. A wrap is also more cost-effective if you decide to change your design later, while extremely durable if you want to keep the same design for years at a time. We love to get creative. Our in-house graphics department has created several stock designs, but that doesn't mean you have to use them! Click below to browse our collection of stock designs, or if you are familiar with design, you can download a template and create your own vinyl design in Adobe Illustrator.

Upholstery Options

Our in-house upholstery shop uses the most rugged, weather-resistant material possible for our line of fishing boats, while still maintaining premium texture and comfort. With our wake boats, we carried the same standard of quality. That means your boats interior will look better and feel softer, for much longer.

PERFORMANCE OPTIONS

Rip Tide™ Surf System

We designed the rip tide surf system to be the fastest, most complete and intuitive surf system available. With the flip of a switch, $\frac{1}{4}$ inch aluminum plates extrude three inches past the transom of the boat into the water creating a bigger wave in three seconds flat. Change between goofy and regular riding styles quickly and easily.

Unparalleled Ballast System

We've integrated the largest wake boat ballast ever into the AL-24. Spanning from the transom to the bow, the AL-24 ballast offers a whopping 4,200 lbs stock ballast, with a 4,800 lbs option. That makes the AL-24 not only the lightest 24' wake boat on the road, but also the heaviest 24' wake boat in the water.

With the fast fill ballast system, the industries biggest stock ballast system fills in under 90 seconds and empties in less than 30 seconds. That's doubling the weight of the AL-24 in under a minute and a half!

POWER WHEN YOU NEED IT

The engine is the heart of the AL-24. Have your pick of the four most premium marine engine options on the market, including a Hyundai s250 diesel and Indmars lineup of performance Corvette and Cadillac engines.

Corvette LS3

- Capacity: 6.2 Liters
- Horsepower: 450 HP
- Torque: 424 ft-lbs

"Surfing is such an amazing concept. You're taking on Nature with a little stick and saying, 'I'm gonna ride you!' And a lot of times Nature says, 'No you're not!' and crashes you to the bottom.
